PROFESSIONAL SUMMARY

WordPress Developer with 2.5+ years of hands-on experience working with agencies and remote teams. Specialized in pixel-perfect Figma to WordPress conversion, responsive development, and SEO-first, performance-optimized websites. Proven ability to manage and maintain multiple live websites, collaborate with designers, and deliver reliable results in WFH environments. Actively integrates AI tools (Claude Code, ChatGPT, Gemini) into daily development workflow for faster debugging, smarter code review, and improved output quality.

SKILLS

WordPress	Custom Themes (basic), Custom Plugins (basic), Elementor Pro, ACF, WooCommerce
Frontend	HTML5, CSS3, JavaScript, Bootstrap, Tailwind CSS
Backend	PHP (Basic-Intermediate), MySQL
Other	jQuery, AJAX, Git (push/pull workflow)
Practices	SEO-friendly Development, Responsive Design, Performance Optimization
AI Tools	Claude Code (code suggestions & review), ChatGPT (code suggestions), Gemini Deep Research (debugging & concept research)

PROFESSIONAL EXPERIENCE

WordPress Developer (WFH) — MadeByAura
March 2024 – Present

- Developed 10+ WordPress websites from Figma designs with pixel-perfect accuracy and full responsiveness.
- Maintaining 15+ live websites, handling updates, bug fixes, and performance improvements.
- Improved average website load speed by ~40% using optimization best practices.
- Built SEO-friendly page structures using proper HTML tags, clean code, and fast-loading layouts.
- Worked with Elementor Pro and ACF to create scalable and client-friendly page management.
- Provided basic custom theme and plugin enhancements for live production websites.
- Maintained WooCommerce websites (product updates, content management, and site stability).
- Used Git for version control and collaborated with team members in a remote setup.
- Ensured high client satisfaction by delivering reliable, maintainable, and clean solutions.

Web Development Training — ConicPlex
October 2023 – December 2023 (2 Months)

- Received real-world development exposure by working on live WordPress and PHP-based projects.
- Strengthened fundamentals of frontend-backend integration and debugging.

Web Developer Intern — HATKESH InfoTech Pvt. Ltd.
December 2022 – May 2023 (6 Months Internship)

- Worked as the sole web developer for a grocery store website project.
- Designed and developed both frontend and backend using PHP and MySQL.
- Implemented dynamic features such as product catalog, cart functionality, and user accounts.
- Gained practical experience in complete project lifecycle handling.

Git for Beginners — Udemy — Jan 2024 (2.5 hours)
UI/UX Basic — AT&T; E-Learning — Feb 2024

PROJECT HIGHLIGHTS

Scalable Multi-Location CMS — Multi-Dashboard to Single Dashboard Migration (Agency, Team Project): Led the conversion of a multi-dashboard microsite into a unified single-dashboard architecture as part of a team effort. Implemented a custom ACF setup with reusable content structures that serve location-specific content from one layout, eliminating duplicate page creation and making new locations easier to add.

Multi-Location Restaurant Management Platform (Agency Project): Built the Home, About, Menu, Locations and Contact pages in Elementor, with ACF-powered Custom Post Types for menu management and a dynamic location management system. Menu and location updates are handled from the WordPress dashboard, with full responsive support across desktop, tablet and mobile.

Lead Generation & Franchise Marketing Platform (Agency Project): Developed responsive marketing pages and multiple campaign landing pages in Elementor, and configured WS Form lead capture forms, streamlining lead capture and speeding up marketing campaign deployment.

Full Website Rebuild — Solo (Agency Handover Project): Independently rebuilt a complete WordPress website originally developed by an external agency, maintaining pixel-perfect design parity with the existing live site using Elementor. Delivered the project solo, demonstrating ability to reverse-engineer and replicate production-level work under real client expectations.

Mobile Navigation System — Solo Development from Figma: Solely developed a fully functional mobile navigation system from scratch based on provided Figma mockups. Translated design specifications into responsive, production-ready code, ensuring cross-device consistency and smooth UX.

Bakestik — Multi-Location Bakery Franchise Website (Personal Project): Built a WordPress site for a fictional 12-location bakery franchise with a custom PHP plugin (Location and Menu Item post types, taxonomies, version-controlled ACF field groups). One template drives all 12 location pages; includes a store finder with search, "Use my location" sorting and a Leaflet map, a live "Open now" badge calculated in each bakery's own time zone, LocalBusiness structured data, and WP-CLI commands that rebuild the demo site from code. Live demo: bakestik.pages.dev

FoodieCafe — Restaurant Landing Page (Personal Project): Built an animation-heavy, seven-section landing page for a fictional food court using HTML, CSS and vanilla JavaScript with GSAP and Lenis: split-letter hero reveal, parallax collage, a 24-dish menu filtered with GSAP Flip, gallery lightbox and a validated booking form. Respects reduced-motion settings and stays fully usable without JavaScript. Live demo: ashrafikhan.github.io/FoodieCafe

EDUCATION

B.Tech in Computer Engineering — BVM Engineering College, Gujarat
Completed: 2025
